Final Assignment

April 26, 2023

Extracting and Visualizing Stock Data

Description

ul>

Extracting essential data from a dataset and displaying it is a necessary part of data science; therefore individuals can make correct decisions based on the data. In this assignment, you will extract some stock data, you will then display this data in a graph.

Table of Contents

```
Define a Function that Makes a Graph
        Question 1: Use yfinance to Extract Stock Data
        Question 2: Use Webscraping to Extract Tesla Revenue Data
        Question 3: Use yfinance to Extract Stock Data
        Question 4: Use Webscraping to Extract GME Revenue Data
        Question 5: Plot Tesla Stock Graph
        Question 6: Plot GameStop Stock Graph
    Estimated Time Needed: 30 min

0.1 Define Graphing Function

from plotly.subplots import make_subplots

In this section, we define the function make_graph. You don't have to know how the function works, you should only care about the inputs. It takes a dataframe with stock data (dataframe must contain Date and Close columns), a dataframe with revenue data (dataframe must contain Date and Revenue columns), and the name of the stock.

```
[170]: def make_graph(stock_data, revenue_data, stock):
    fig = make_subplots(rows=2, cols=1, shared_xaxes=True,u
    subplot_titles=("Historical Share Price", "Historical Revenue"),u
    vertical_spacing = .3)
    stock_data_specific = stock_data[stock_data.Date <= '2021--06-14']
    revenue_data_specific = revenue_data[revenue_data.Date <= '2021-04-30']
    fig.add_trace(go.Scatter(x=pd.to_datetime(stock_data_specific.Date,u
    infer_datetime_format=True), y=stock_data_specific.Close.astype("float"),u
    iname="Share Price"), row=1, col=1)
    fig.add_trace(go.Scatter(x=pd.to_datetime(revenue_data_specific.Date,u
    infer_datetime_format=True), y=revenue_data_specific.Revenue.
    infer_datetime_format=True), y=revenue_data_specific.Revenue.
    infer_datetime_format=True), row=2, col=1)</pre>
```

```
fig.update_xaxes(title_text="Date", row=1, col=1)
fig.update_xaxes(title_text="Date", row=2, col=1)
fig.update_yaxes(title_text="Price ($US)", row=1, col=1)
fig.update_yaxes(title_text="Revenue ($US Millions)", row=2, col=1)
fig.update_layout(showlegend=False,
height=900,
title=stock,
xaxis_rangeslider_visible=True)
fig.show()
```

0.2 Question 1: Use yfinance to Extract Stock Data

Using the Ticker function enter the ticker symbol of the stock we want to extract data on to create a ticker object. The stock is Tesla and its ticker symbol is TSLA.

```
[121]: tesla = yf.Ticker("TSLA")
```

Using the ticker object and the function history extract stock information and save it in a dataframe named tesla_data. Set the period parameter to max so we get information for the maximum amount of time.

```
[122]: tesla_data = tesla.history(period="max")
```

Reset the index using the reset_index(inplace=True) function on the tesla_data DataFrame and display the first five rows of the tesla_data dataframe using the head function. Take a screenshot of the results and code from the beginning of Question 1 to the results below.

```
[123]: tesla_data.reset_index(inplace=True)
tesla_data.head()
```

```
[123]:
                                                                          Dividends

0.3 Question 2: Use Webscraping to Extract Tesla Revenue Data

Use the requests library to download the webpage https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBMDeveloperSkillsNetwork-PY0220EN-

SkillsNetwork/labs/project/revenue.htm Save the text of the response as a variable named html_data.

```
[124]: url = "https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/

SIBMDeveloperSkillsNetwork-PY0220EN-SkillsNetwork/labs/project/revenue.htm"

html_data = requests.get(url).text
```

Parse the html data using beautiful_soup.

```
[125]: soup = BeautifulSoup(html_data)
```

Using BeautifulSoup or the read_html function extract the table with Tesla Quarterly Revenue and store it into a dataframe named tesla_revenue. The dataframe should have columns Date and Revenue.

Click here if you need help locating the table

Below is the code to isolate the table, you will now need to loop through the rows and columns soup.find_all("tbody")[1]

If you want to use the read_html function the table is located at index 1

Execute the following line to remove the comma and dollar sign from the Revenue column.

```
[127]: tesla_revenue["Revenue"] = tesla_revenue["Revenue"].str.replace(',|\$',"")
```

/home/jupyterlab/conda/envs/python/lib/python3.7/site-packages/ipykernel_launcher.py:1: FutureWarning:

The default value of regex will change from True to False in a future version.

Execute the following lines to remove an null or empty strings in the Revenue column.

```
[128]: tesla_revenue.dropna(inplace=True)
tesla_revenue = tesla_revenue[tesla_revenue['Revenue'] != ""]
```

Display the last 5 row of the tesla_revenue dataframe using the tail function. Take a screenshot of the results.

```
[129]: tesla_revenue.tail()
```

[129]: Date Revenue 48 2010-09-30 31 49 2010-06-30 28 50 2010-03-31 21 52 2009-09-30 46 53 2009-06-30 27

0.4 Question 3: Use yfinance to Extract Stock Data

Using the Ticker function enter the ticker symbol of the stock we want to extract data on to create a ticker object. The stock is GameStop and its ticker symbol is GME.

```
[186]: GameStop = yf.Ticker("GME")
```

Using the ticker object and the function history extract stock information and save it in a dataframe named gme_data. Set the period parameter to max so we get information for the maximum amount of time.

```
[187]: gme_data = GameStop.history(period="max")
```

Reset the index using the reset_index(inplace=True) function on the gme_data DataFrame and display the first five rows of the gme_data dataframe using the head function. Take a screenshot of the results and code from the beginning of Question 3 to the results below.

```
[188]: gme_data.reset_index(inplace=True) gme_data.head()
```

```
[188]:
                                                         Close
                                                                   Volume
                                                                           Dividends

0.5 Question 4: Use Webscraping to Extract GME Revenue Data

Use the requests library to download the webpage https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBMDeveloperSkillsNetwork-PY0220EN-SkillsNetwork/labs/project/stock.html. Save the text of the response as a variable named html_data.

```
[200]: url1 = " https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/

SIBMDeveloperSkillsNetwork-PY0220EN-SkillsNetwork/labs/project/stock.html"

html_data1 = requests.get(url1).text
```

Parse the html data using beautiful_soup.

```
[201]: soup = BeautifulSoup(html_data1)
```

Using BeautifulSoup or the read_html function extract the table with GameStop Quarterly Revenue and store it into a dataframe named gme_revenue. The dataframe should have columns Date and Revenue. Make sure the comma and dollar sign is removed from the Revenue column using a method similar to what you did in Question 2.

Click here if you need help locating the table

Below is the code to isolate the table, you will now need to loop through the rows and columns soup.find_all("tbody")[1]

If you want to use the read_html function the table is located at index 1

```
[202]: gme_revenue = pd.DataFrame(columns=['Date', 'Revenue'])
for table in soup.find_all('table'):
    if ('GameStop Quarterly Revenue' in table.find('th').text):
        rows = table.find_all('tr')

    for row in rows:
        col = row.find_all('td')

        if col != []:
            date = col[0].text
            revenue = col[1].text.replace(',','').replace('$','')
```

Display the last five rows of the gme_revenue dataframe using the tail function. Take a screenshot of the results.

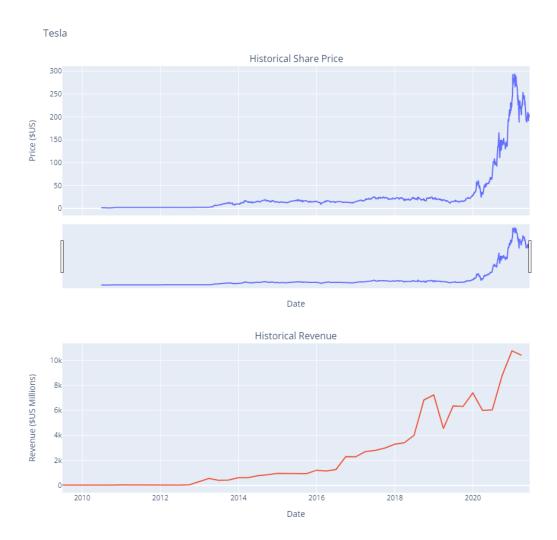

```
[203]: gme_revenue.tail()
```

[203]: Date Revenue 2006-01-31 1667 57 58 2005-10-31 534 59 2005-07-31 416 2005-04-30 475 60 61 2005-01-31 709

0.6 Question 5: Plot Tesla Stock Graph

Use the make_graph function to graph the Tesla Stock Data, also provide a title for the graph. The structure to call the make_graph function is make_graph(tesla_data, tesla_revenue, 'Tesla'). Note the graph will only show data upto June 2021.

```
[193]: make_graph(tesla_data ,tesla_revenue, 'Tesla')
```

0.7 Question 6: Plot GameStop Stock Graph

Use the make_graph function to graph the GameStop Stock Data, also provide a title for the graph. The structure to call the make_graph function is make_graph(gme_data, gme_revenue, 'GameStop'). Note the graph will only show data upto June 2021.

```
[204]: make_graph(gme_data, gme_revenue, 'GameStop')
```

About the Authors:

Joseph Santarcangelo has a PhD in Electrical Engineering, his research focused on using machine learning, signal processing, and computer vision to determine how videos impact human cognition. Joseph has been working for IBM since he completed his PhD.
